EDUCATION

University of Illinois at Urbana-Champaign

GPA: 3.87/4.00

B.S. in Computer Science & Economics; Minor in Mathematics

Expected Graduation: May 2028

- Coursework: Data Structures, Algorithms, Systems Programming, Database Systems, Machine Learning, Probability & Statistics

EXPERIENCE

The Boring Company

Bastrop, TX

Software Engineering Intern

Sep. 2026 – Dec. 2026

- Contribute across **6 internal engineering and operations tools**, building and debugging React/TypeScript interfaces, Django services, PostgreSQL workflows, and Dockerized applications used by operational teams.
- Implement backend and infrastructure improvements with **Kubernetes**, server-side **Redis** caching, AWS/S3 data pipelines, and Linux/Nginx deployments; trace failures across application, service, database, and network boundaries.
- Work directly with internal users and engineers to turn loosely scoped operational problems into production changes, balancing reliability, maintainability, and speed while iterating from real usage.

Hyphenate (formerly Maximor AI)

New York, NY

Software Engineering Intern

May 2026 – Aug. 2026

- Took Flux Analysis from a static pre-production prototype to deployment across **3 enterprise customers** in the roughly **\$10M–\$100M revenue range**, owning scoping, architecture, implementation, testing, rollout, and iteration.
- Rebuilt Flux from a single LLM call into a **managed-agent system using the Claude SDK**, with customer-context RAG, backend tool integration, human review, and Temporal orchestration for multi-step analysis and retries.
- Translated distinct customer accounting structures and reporting workflows into reusable product behavior across FastAPI, React/TypeScript, NetSuite, Snowflake, and PostgreSQL rather than one-off implementations.
- Built a validation harness against independent NetSuite SuiteQL queries and drove line-item correctness to **99%**; debugged duplicate, stale, and soft-deleted records across production financial-data pipelines.
- Configured reproducible DevPod environments on **AWS ECS/Fargate** for **5 engineers** and migrated integration endpoints from Flask to FastAPI with typed schemas, auth, validation, tests, and explicit failure handling.

Zaap AI

Champaign, IL

Founder & Software Engineer

Jan. 2026 – Present

- Built a zero-to-one personal-finance platform for **50 beta users** using React, Django, Supabase, and Plaid, with account/transaction ingestion, onboarding, budgeting, dashboards, and an AI assistant grounded in user financial data.
- Designed personalization across onboarding responses, transaction behavior, and **14 spending categories**; reduced API calls by **35%** through client-side caching and redesigned conversation state/data fetching.

University of Illinois Urbana-Champaign - Parasol Lab

Champaign, IL

Research Assistant - Parallel Computing

Jan. 2026 – Present

- Implement parallel scan, reduction, and inner-product primitives in **C++/STAPL**; profile synchronization, memory-access behavior, load balancing, and scalability across multithreaded workloads.

PROJECTS

Project Luymn AutoDock | *Autonomous Systems, Modeling & Simulation*

- Joined with no prior aerospace background and later led the AutoDock team, building simulation foundations for autonomous docking work aimed at student competitions and independent research.

Transformer from Scratch | *Python, PyTorch*

- Implemented a GPT-style Transformer with multi-head attention, positional encoding, causal masking, feed-forward layers, and autoregressive generation; trained and evaluated with cross-entropy loss and perplexity.

TECHNICAL SKILLS

Languages: Python, C++, TypeScript, JavaScript, SQL

Frameworks & Data: React, Django, FastAPI, Flask, Node.js, PostgreSQL, Snowflake, MongoDB, Supabase

Cloud & Systems: AWS, S3, ECS/Fargate, Kubernetes, Redis, Docker, Linux, Nginx, Temporal, Git, GitHub Actions

AI & ML: Claude SDK, RAG, Agentic Workflows, PyTorch, TensorFlow, scikit-learn, XGBoost, Evaluation Harnesses
